Genomic Data Sharing (GDS) Policy and NIH Applications

Mar 15, 2017
Sponsored Research Newsletter, NIH

For a study supported by NIH that will *generate* large-scale genomic data or *use* large-scale genomic data from a NIH-designated data repository (dbGaP), the application should include a data sharing plan or plans for requesting data (see [NOT-OD-15-083](http://osr.ucsf.edu/content/genomic-data-sharing-gds-policy-and-nih-applications)). If the Funding Opportunity Announcement (FOA) requires UCSF IRB review and approval of the proposed Consent form to the proposed human subjects protocol contact the PIs assigned RSC as soon as possible. Further guidance provided on the [OSR Website - GDS Policy page](http://osr.ucsf.edu/content/genomic-data-sharing-gds-policy-and-nih-applications).
